

Gas Compression Systems

Boost Your Business With the Industry's Best Value

AFGlobal uses innovative design, engineering and fabrication tools to ensure your equipment arrives at location ready to run, increasing overall efficiency.

MAXIMIZE RUN-TIME RELIABILITY

From high-horsepower, high-pressure well stimulation on down, AFGlobal knows pumping systems. Our gas compression offering combines that experience with world-class manufacturing capabilities for maximum results. And those results are possible because of our skilled gas compression experts and strong service culture.

Our team has one job: delivering the most run-time reliability in gas compression systems. A lot goes into maximizing run-time reliability. Here's how we do it.

PRODUCT AVAILABILITY, WHEN YOU NEED IT

A deep inventory of industry-leading systems is there when you need it, and so are our people. Our equipment can be onsite faster and ready to perform.

EFFICIENT MAINTENANCE

Ease of maintenance is designed into our gas compression systems from the start. This can be an afterthought with ordinary systems. High-efficiency maintenance has cascading benefits for your business—from satisfied customers to more productive field staff.

STANDARDIZED SYSTEMS

Our suite of standardized systems, optimized for nearly every gas compression application, gives you fast, off-the-shelf availability. Greater parts commonality than custom systems means more efficient maintenance and better inventory control.

This approach also enables us to recycle used components we certify such as frames, cylinders and engines to further reduce your costs.

Our gas compression systems are compatible with every leading engine, compressor and cooler manufacturer.

CUSTOM SYSTEMS FOR ANY APPLICATION

For those special gas compression applications that fall outside the range of our standard systems, we build to your specifications. We are not locked in to using components from particular suppliers. We use high-quality components that meet your price, performance, and scheduling needs, from all the best sources. At the front end, our engineering support team assists you with optimizing your system to deliver the best combination of cost and performance.

Our extensive packaging background and years of experience in structural fabrication, skids and custom-spec pressure vessels of our own design, we know how to get it done right. You can rely on a fully tested system delivered on time, on budget.

ENGINEERING LEADS QUALITY

Both standard and custom systems benefit from a proven, systematic quality control and assurance program that covers every step of the process, from first contact to final delivery. This is where our manufacturing experience is an important advantage to you.

Our compression facility is ASME certified and our quality management system is API Q1 compliant.

OPTIMIZED SUPPLY CHAIN

Your supply chain can gain valuable advantages using AFGlobal to design, fabricate, and package your compression equipment. From the wellhead to the end user, our offerings provide a clear advantage in optimizing your supply chain.

EFFECTIVE TRAINING BENEFITS HSE

Our systems include a training program for operators. This program is designed by training professionals for maximum effectiveness. A thorough knowledge of the systems can have a large and beneficial impact on HSE and operational efficiency. This is also an area where our standardized systems offer an important advantage.

AFGlobal Compression Systems work across key upstream, midstream and downstream industry applications, including:

- Gas Lift
- Overhead gas/vapor recovery (OH/ VRU)
- Gathering
- Process
- CO₂
- Plant inlet / residue
- Transmission

ABOUT AFGLOBAL

For decades, AFGlobal has created reliable, highly effective solutions to difficult challenges in the oil and gas industry. Our unique approach combines conventional OEM processes and technology with unconventional thinking, to quickly find the best solutions for our clients.

Technologies and products for the oil and gas industry are trusted by many of the industry's best known companies to reduce downtime, mitigate risk, and improve ROI. Our proven solutions are packaged intelligently and delivered with the highest levels of customer service.
